OERCO2 project

INTELLECTUAL OUTPUT 1

1.2.1. REPORT WITH THE MATERIALS USED IN THE CONSTRUCTION OF BUILDINGS

PROFESSIONAL LEVEL

Consortium members: Universidad de Sevilla (US), Asociación Empresarial de Investigación Centro Tecnológico del Mármol, Piedra y Materiales (CTM), CertiMaC Soc. Cons. a r. L. (CertiMaC), Centro Tecnologico da Ceramica e do Vidro (CTCV), Universitatea Transilvania din Brasov (UTBV), Asociatia Romania Green Building Council (RoGBC)

DESCRIPTION OF THE SURVEY

This report has been used as presentation of the survey's results of the OERCO2 project, as an integral part of the Intellectual Output 1-Study of the methodology for calculation of CO2 of constructive processes and analysis of life cycle.

The purpose of this survey is to collect information from the respondents, who are experts in the different fields of construction. Surveys were used as a means of collecting information, in order to analysed the construction methods of the countries involved and materials used in each process to be taken into account when making the total count of CO2 emissions is produced.

A survey was given or sent to each of the respondents, which corresponded to partner or enterprises within the network of the consortium partners. Some of them were sent by email and others were delivered in hand in project presentations

At the entrance to the event, each of the attendants was given a survey, which corresponded to two different typologies, depending on the profile provided in the previous registration, found two different types of survey adequate to two areas within the construction sector, Academic and Professional field. The survey was conducted voluntarily, obtaining a great response from the attendants who showed a high percentage of participation.

The total of collected forms had a total of 142, both online and handwritten filled forms. 45 of them, were engineers, 34 were Quantity Surveyors or Building Engineers, 22 Architects and the remaining are other professionals related to construction sector.

The feedback from experts' will be used to compile the most common materials and constructive processes in each participant country and to make the total count of CO2 emissions is produced.

OERCO2. CENTRO DE RECURSOS ONLINE PARA EL ESTUDIO INNOVADOR DEL CICLO DE VIDA DE LOS MATERIALES DE CONSTRUCCIÓN

Con este proyecto se pretende crear un recurso educativo de libre acceso (REA u Open Educational Resources -OER-) en la que se unifique el cálculo de todas las emisiones de CO2 en cada una de las fases del edificio para, así, tener una idea general de la huella de carbono del edificio desde la concepción del mismo y decidir sobre cada una de las variables de la edificación.

- Almost half of respondents are engineers from Romania and they consider that they have strong influence over the selection of materials and construction products on a typical project.
- Public Servant/Regulations and Urban Planner have litlle influence about it.

RESULTS OF THE SURVEY

| Q7 | What is your knowledge of the following materials and o | construction products? |
|----|---|------------------------|
| | Brettstapel | Little or no knowledge |
| | Cross Laminated Timber (CLT) | Aware of but not used |
| | Structural Insulated Panels (SIPs) | Aware of but not used |
| | Straw bale (either load bearing, infill or modular) | Little or no knowledge |
| | Rammed earth | Aware of but not used |
| | Unfired brick | Aware of but not used |
| | Cob | Little or no knowledge |
| | Adobe | Aware of but not used |
| | Hemp (including hemp-lime composites) | Aware of but not used |
| | Limecrete | Aware of but not used |
| | Cardboard (tubes or panels) | Aware of but not used |
| | Ethylene tetrafluoroethylene (ETFE) | Little or no knowledge |
| | Inorganic Fibre Reinforced Polymers (FRP) | Aware of but not used |
| | Geopolymer concrete | Aware of but not used |
| | Concrete containing agricultural wastes | Little or no knowledge |
| | Concrete containing consumer wastes | Little or no knowledge |
| | Concrete containing construction and demolition wastes | Aware of but not used |
| | Concrete containing industrial wastes | Aware of but not used |
| | Precast hollowcore floor slabs | Aware of but not used |
| | Optimised roll-out reinforcement meshes | Aware of but not used |
| | Recycled aggregates | Aware of but not used |
| | Recycled plastic lumber | Aware of but not used |
| | Reclaimed steel | Aware of but not used |
| | Reclaimed timber | Aware of but not used |

- Most of respondents have aware of these kinds of materials but they do not used it.
- There is no material that has been widely used in projects.

RESULTS OF THE SURVEY

| Q8 | For all materials for which 'Used on project(s)' is selected in Q7; How often have you used each of these materials? | | | | |
|-----|---|---|---|--|--|
| | On multiple projects | On a single project | Material is routinely used or considered on all projects | | |
| | 71 | 69 | 5 | | |
| Q9 | For all materials for which 'Used o experience | n project(s)' is selected in Q7 of using each of these mater | | | |
| | Somewhat positive | Neither positive or negative | Mostly positive | | |
| | 69 | 50 | 23 | | |
| Q10 | For all materials for which 'Used on which you used these mate | project(s)' is selected in Q7; T rials. Why did you choose to | | | |
| | Client required it | Low cost | Fits with company ethos | | |
| | 55 | 26 | 21 | | |
| Q11 | For all materials for which 'Used on p | oroject(s)' is selected in Q7; W again? | Vould you use these materials | | |
| | Yes | No | | | |
| | 135 | 7 | | | |
| Q12 | For all materials for which 'Aware of but not used' is selected in Q7; You stated that you are aware of but have not used the following materials on a project. Why have you chosen not to use these materials? | | | | |
| | Lack of technical knowledge or training | Not appropiate for type of projects I am typically engaged in | Insufficient fit with culture of clients | | |
| | 43 | 38 | 32 | | |

- Most of respondents have used each of these materials on multiple or a single projects and their experience of using it was somewhat prositive.
- These materials were choosen because clients required it.
- They would use these materials again, but the main problema about that is the lack of technical knowledge or training.
- They consider that the least important is the bad press.

RESULTS OF THE SURVEY

| Q13 | Thinking more generally about alternative materials in construc believe the following factors are in preventing | |
|-----|---|----------------------|
| | High costs | Very important |
| | Institutional culture and established practice | Very important |
| | Insufficient design or performance information | Very important |
| | Lack of design knowledge and skills | Very important |
| | Shortage of skilled labour | Very important |
| | Lack of regulation | Very important |
| | Lack of demonstration projects | Somewnat important |
| | Time constraints | Somewhat important |
| | Bad press | Somewhat unimportant |
| | Conservative nature of clients | Very important |
| | Negative perceptions of industry | Somewhat important |
| Q14 | How important do you believe the following developments could of alternative materials and construction pr | |
| | Higher value in assessment schemes (e.g. BREEAM) | Somewhat important |
| | Regulation limiting embodied carbon in construction | Very important |
| | Reductions in material cost | Very important |
| | More environmentally conscious clients | Very important |
| | More information on material performance and design | Very important |
| | More demonstration projects and case studies | Very important |
| | Training on designing with alternative materials | Very important |

Most of respondents believe that some measures have to be taken to encourage the use of alternative materials and construction products. For that reason, the OERCO2 Project is so necessary.

MANY THANKS!

Report 1.3.1. Level of implementation in universities, architectural and engineering, etc.
